

app name: "Doable"

problem: everybody has those tasks that won't get done despite being on your to-do list those tasks fell victim to postponing/procrastination... WHY? you didn't give your task a time and place to live... solution make them doable!

main tracker for task "sessions" swipe to start timer on the right project click on the project to select a specific task e.g. none task2 task1 task3 tasks

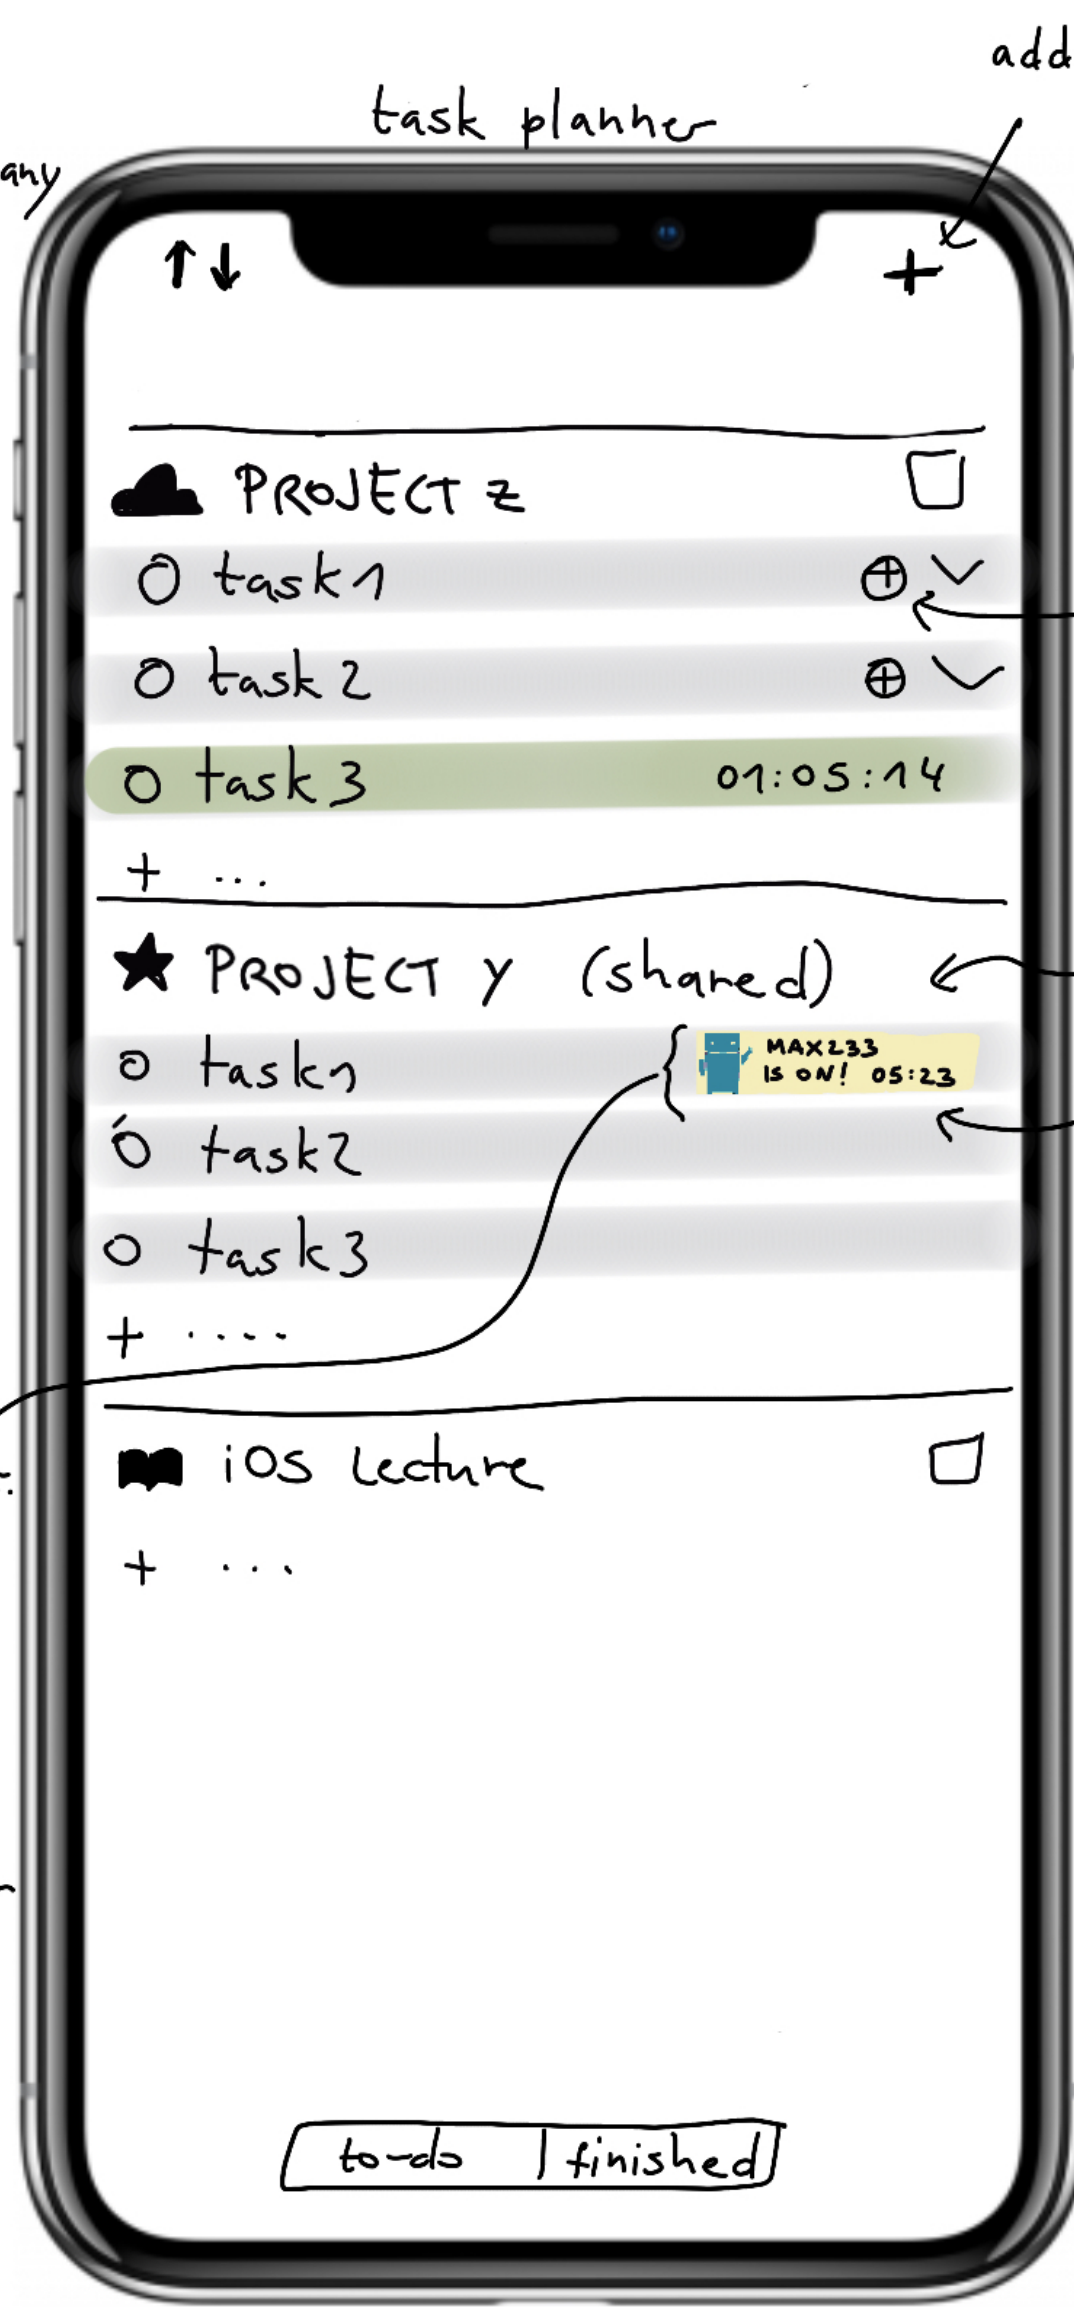

if no task is selected a pop up will appear after the task is finished to specify the task you worked on

"dump" all tasks there planned tasks will appear in calendar

goal: move as many unplanned (therefore undoable) tasks to the calendar per drag and drop! a quick pop up window will appear in which you can assign time, date, superordinate project, tags... and BOOM your task is planned and doable

also visible on main tracker? when somebody is working on shared project? boost motivation?

add project

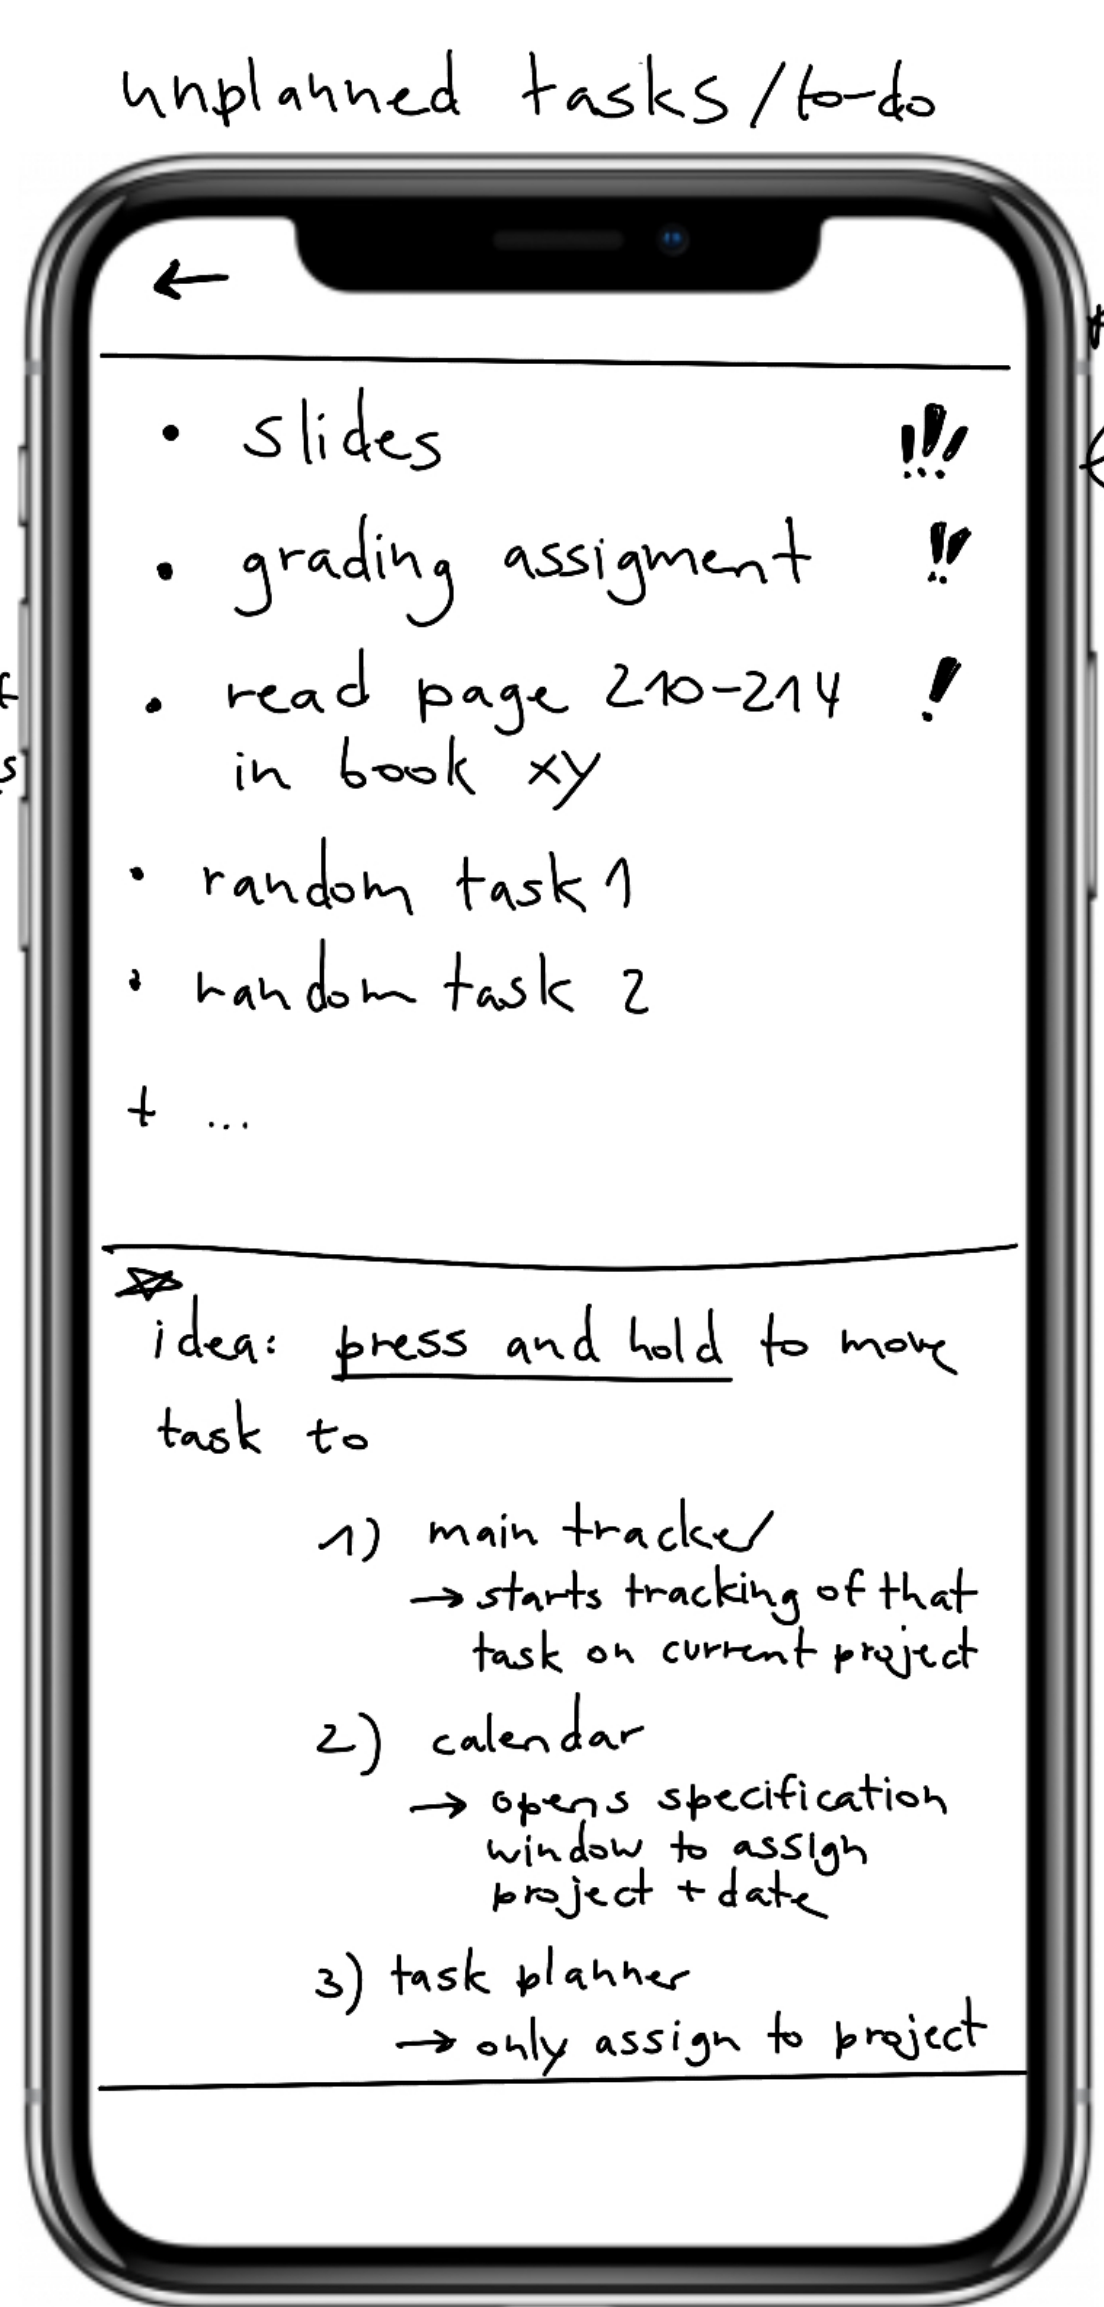

unfold task to see past sessions

plan new session

! to be aware of session collisions

feature for later?

custom avatar for everyone?

priorities

contains scheduled tasks in different view

alex ver.

alternative app name: "Stwo"

because

- when you start tracker it counts down 3,2,1 (slowly)
- moving unscheduled tasks to calendar reduces number from 3 to 1??
- app helps you to reduce number of "postponable" tasks by assigning time to do it
